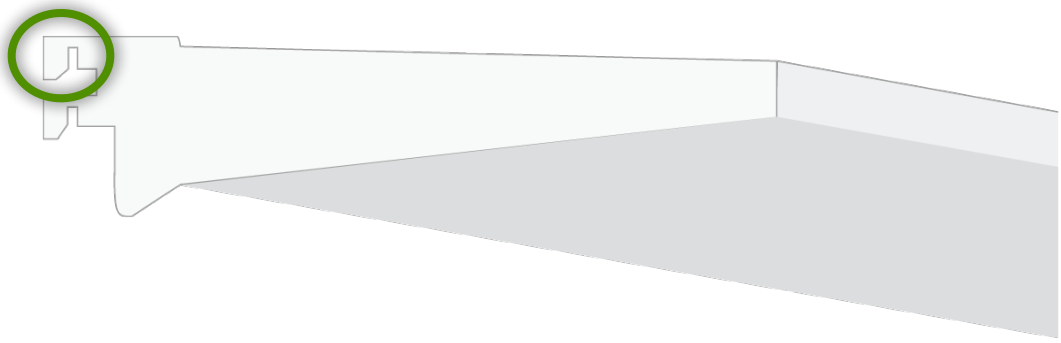
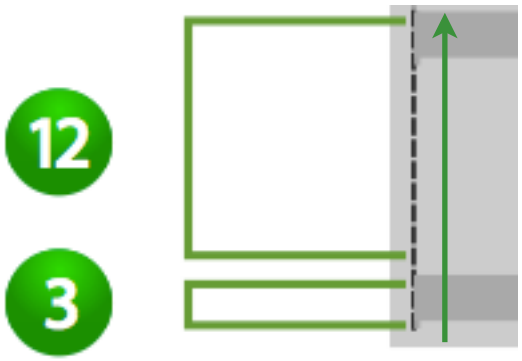
Fixture Basics 90” - 100”

Shelves



All shelves contain two or three prongs. These prongs slide into the holes built into each wall and lock into place when pushed down. Only the **top** prongs of shelves are used for counting purposes.

When placing shelves, always start at the bottom of the fixture and **count up**.



In this example, the first shelf’s top prong is inserted into the third hole from the floor. The next shelf is placed by counting up twelve empty holes from the first shelf. The top prong is then placed into the 12th hole.

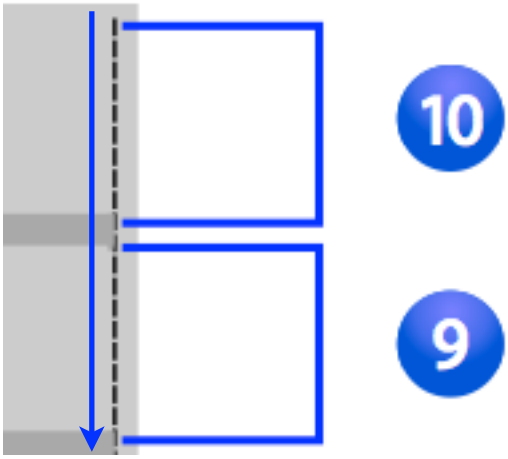
Remember, green represents shelves, and always **count up**.

Fixture Basics

Hang Bars

All hang bars contain two prongs. These prongs slide into the holes built into each wall and lock into place when pushed down. Only the **top** prongs of hang bars are used for counting purposes.

When placing hang bars, always start at the top of the fixture and **count down**.



In this example, the **top** prong of the first hang bar is inserted into the tenth hole from the top. The next hang bar is placed by counting down nine empty holes from the first hang bar. The top prong is then placed into the ninth hole.

Remember, **blue** represents hang bars, and always **count down**.
